

## Belridge SC Academic Enrichment Program 2021

*Providing opportunity ... embracing curiosity*

## Our Programs

In an increasingly technology-rich and innovative economy, the nature of work is rapidly changing. Our future workforce needs future ready skills to ensure global competitiveness and to address the social, environmental and economic challenges that lay ahead.

Our Academic Programs provide the platform for our students to develop the knowledge, skills and core competencies required for the careers of the future. With a focus on the development of higher order skills such as problem solving, critical thinking, creativity, communication, collaboration and entrepreneurship, students will develop personal attributes and employable skills putting them at the forefront of our future workforce.

### STEM Program

STEM refers not just to the disciplines of Science, Technology, Engineering and Mathematics but also to a cross disciplinary approach to them. Students in the STEM program will be extended and enriched across the Mathematics, Science and Digital Technologies curriculum. This will include the opportunity to engage in project based learning and to explore STEM in the real world.

A strong focus on problem solving and critical thinking within the program aims to develop and extend their natural curiosity in the world around them. A range of extracurricular activities such as incursions and excursions will enrich classroom based learning and develop STEM literacy and core capabilities across the curriculum.

Our aim is to ensure all students are future ready, able to make evidence based decisions whilst displaying a positive attitude towards STEM and its importance in becoming informed global citizen.

### Humanities Program

Within the English and Humanities (HASS) Learning areas, students will be exposed to an extended and enriched learning program aligned with the Western Australian Curriculum. This provides our student with the skills and knowledge that will be required in the continually evolving workplace and empowers them to pursue future pathways as critical and creative thinkers.

The Humanities Enrichment Program will provide students with the opportunity to build on their pre-existing social and environmental knowledge, engaging with a wide range of texts, excursions and learning experiences. Students will develop higher-order skills in questioning, researching, analysing, evaluating and communicating across both English and HASS.

Students will experience learning in familiar and unfamiliar contexts that relate to the school curriculum, local community, regional and global contexts. They will have the opportunity to participate in a range of extra-curricular activities which enshrine their learning ensure they complete their secondary education with a range of skills, and knowledge
