BELRIDGE SECONDARY COLLEGE

Academic Enrichment Program

Our Programs

In an increasingly technology-rich and innovative society, the nature of work is changing rapidly. Our future workforce needs people who are future-ready, to ensure global competitiveness and to address the social, environmental, and economic challenges that lay ahead.

Our Academic Enrichment Program provides the platform for students to develop a range of future ready skills, such as creativity, critical thinking, collaboration, and communication, whilst developing their knowledge and understanding across the curriculum.

With a focus on the development of higher-order skills and entrepreneurship, students will develop personal attributes and employable skills putting them at the forefront of our future workforce.

STEM PROGRAM

STEM refers not only to the disciplines of Science, Technology, Engineering and Mathematics but to a cross-disciplinary approach to building core transferrable skills. Students in the STEM Program will be extended and enriched across their Mathematics, Science and Digital Technologies curriculum. This will include the opportunity to engage in project-based learning and to explore STEM in the real world.

A strong focus on problem-solving and critical thinking within the program aims to develop and extend their natural curiosity in the world around them. A range of extracurricular activities such as incursions and excursions will enrich classroom-based teaching, promoting positive learning outcomes and success.

At Belridge SC, we aim to ensure all students are ready to take on the challenges of the future. Providing the knowledge and skill to make evidence-based decisions whilst promoting the importance in becoming an informed and active global citizen sets our students on the path for a successful future.

HUMANITIES PROGRAM

Within the English and Humanities (HASS) Learning areas, students will be exposed to an extended and enriched learning program aligned with the Western Australian Curriculum. This provides our student with the skills and knowledge that will be required in the continually evolving workplace and empowers them to pursue future pathways as critical and creative thinkers.

The Humanities Enrichment Program will provide students with the opportunity to build on their pre-existing social and environmental knowledge, engaging with a wide range of texts, excursions and learning experiences. Students will develop higher-order skills in questioning, researching, analysing, evaluating and communicating across both English and HASS.

Students will experience learning in familiar and unfamiliar contexts that relate to the school curriculum, local community, regional and global contexts. They will have the opportunity to participate in a range of extra-curricular activities which enshrine their learning ensure they complete their secondary education with a range of skills and knowledge.

Belridge Academic Enrichment Program

(Students participate in both STEM and Humanities Programs)

Providing opportunity … embracing curiosity
